

# Himanshu Khatri (Full Stack Developer)

EmailAddress:[himanshuk.dev@gmail.com](mailto:himanshuk.dev@gmail.com)

Location: [NewDelhi, India](#)

## ABOUTME

---

**Certified Scrum Master With 10+ years** of Full Stack Software Development experience Specializing, in Web and Client/ Server technologies. Prior work experience includes Onsite Client handling Exposure and working with ISO 9001 CMM Level 5 Companies. I've worked in programming and project management in my career and I have a lot of experience with Frontend and Backend as well as many other platforms and coding language sand feel confident I could build whatever you need.

These experiences make me qualified to lead projects of any size to completion and ensure client satisfaction. Please feel free to take a look at my past projects. I welcome the opportunity to speak about any project type and the possibility of working together in the future.

## TECHNICALSKILLS

---

✚JavaScript,Next.js,React,Redux,NodeHTML5/HTML,CSS3/CSS, Bootstrap ✚

Database: MySQL, SQL Server, MongoDB, PostgreSQL

✚Methodologies:Test Driven Development(TDD),Agile ,and Waterfall ✚

Package Manager: NPM, Yarn

✚Development Tools :Github,Visual Studio Code, Docker ✚

Operating Systems: Windows, Linux

✚Cloud: AWS, Azure, GCP

## EDUCATION

---

### IT| Bachelor of Engineering

National Institute of Information Technology

03/1998 – 02/2001 NEW DELHI, INDIA

### IT| Advance Diploma in Computer Programming

National Institute of Information Technology

03/2001 – 02/2002 NEW DELHI, INDIA

## **IT | Master of Business Administration**

All India Management Association

03/2002 – 02/2004 NEW DELHI, INDIA

## **WORK EXPERIENCE**

---

**Position:** Full Stack Developer

**Company:** Full Time Contractor

**Timeline:** 06/2014 to till date

**Position:** Software Developer

**Company:** Mentis Consulting Group Inc

**Timeline:** 09/2011 to till 05/2014

## **PROJECTS**

---

**Project Name :** Reuters

**URL:** <https://www.reuters.com/>

**Module-Subscription**

**Description:** Thomson Reuters is world's largest multimedia news provider with unmatched coverage in over 16 languages, and reaching billions of people worldwide every day, they provide trusted intelligence that powers humans and machines to make smart decisions. Founded in 1851, Reuters has remained true to the Trust Principles of independence, integrity and freedom from bias, working relentlessly to bring news from the source and from every corner of the world. I've worked on the Subscription module on the end to end work flow.

**Architecture:** MVP(model view presentation)

**Environments:** React, Node, Redux, JavaScript, GraphQL, Figma, API's, DataDog, Redux, Apollo client, SCSS, Html, react-storybook, git-hub, Jira, ADO

**Project Name:** Edusity

**Project URL:** <https://dev.edusity.com/>

**Project Description:** E-dusity is an E-Learning Platform system in which one can assign Assignment, Practice Test, Quiz, Question to students and student can take online test and submit. This system has three modules including student, Teacher and Admin. Students can login, they have access to main menu, calendar, Assignment, Practice, Video Tutorial, Questions, Online class documentation, view the things uploaded by the faculties, knowledge books, also send messages to faculties. Teacher can login and have access for viewing, uploading documents, assignment task and projects. Admin can login and manage the Teacher and student details and also view projects

**Role and Responsibility:**

- Analysis and designed coding the project module as a team player.
- Active participant in daily scrum meeting and task assignment via Jira

**Role:** Team Lead

**Environments:** React.js, Redux ,Node and Tailwind, AWS, MySQL, VSCode.

**Project Name:** Precision FTZ

**Project link -** <https://preftz.com/>

**Description:** Precision FTZ software helps manufacturers and distributors establish and successfully manage foreign-trade zones and bonded warehousing operations. With Precision's end-to-end global trade and transportation solutions, distributors and manufacturers can leverage an integrated approach to establishing and managing FTZ operations, lower importing costs, enhance inventory control and improve supply chain velocity and flexibility and enable manufacturer and distributors to maximize the benefits of FTZs.

**Roles and Responsibilities :**Senior developer, Scrum Master and Team Leader.

**Environment:** React, Node, JS, jQuery, Bootstrap, HTML, PSQL

**Project Name :**UsatestPrep

**Projectlink:**<https://student.dev.usatestprep.com/member-login?logout=1>

**Project Description:** Usatest Prep is an E-Learning Platform system in which one can assign Assignments, Practice Tests, Quiz, Questions to students, and students can give the online tests and submit them. This system has three modules including student, Teacher, and Admin. Students can log in, they have access to the main menu, calendar, Assignment, Practice, Video Tutorial, Questions, Online class documentation, view the things uploaded by the faculties, knowledge books, also send messages to faculties. The teacher can login and have access to viewing, uploading documents, assignment task, and projects. Admin can log in and manage the Teacher and student details and also view projects.

**Role and Responsibility:**

- Analysis design and coding the project module as a team leader.
- Active participant in daily scrum meeting and task assignment via Jira

**Role Full Stack Developer**

**Environments:** React.js, Redux, Tailwind, Node, HTML,M-UI

**Project Name:** PINCH me

**Project URL:** [Deployed on company's intranet staging server](#)

**Project Description:** PINCHme is a company that distributes free samples for a user to consuming exchange for their feedback. The users' feedback is then used to develop and improve better product. Their current assignment with me is to develop a new website and mobile app for them. The current feature simple menu in the web-app/mobile-app included navigation/routing, creating private secure routes, Redux for application state management, connected to firebase, login with Facebook and Google, file-configuration based routing, file-configuration based sliders etc.

**Responsibilities:** As a Software Engineer, actively participated in activities –requirement analysis, designing, development and implementation of different change requests, implementation of new requirements Developing the code, code analysis, code review. Developing website layout, application and functions layout.

**Role:** Full Stack Developer

**Environment:** React, Node JS, jQuery, Bootstrap, HTML, MongoDB

**Project Name :** Comprehensive Medical Meeting Management Solution Project

**URL:** <https://www.coagevents.com>

**Description:** Add, Update and organize meetings with logistics and venue management. Can be customized to carryout any type of request and approval process you want to enforce Web, mobile, and internal registration available. Creates registration links and integrates registration forms on to the web. Users can identify registrants from a target list or through a quick NPI number search. Tracks cost to assess the ROI of your meeting initiatives. Collects information required for reporting to Federal and State Agencies, Includes Speaker Scheduling, Selection, and speaker request. Accommodates speaker training, modules, and requirements. Houses distribute and audit the use of approved presentations, Provides full reporting to assess the effectiveness of meeting initiatives. Reports include speaker finance and activity reporting as well as surveys and evaluations.

**Role:** Full Stack Developer

**Environment:** React, Node JS, jQuery, Bootstrap, HTML,PSQL

**Project Name: Learning Management System (LMS)**

**Project URL:** <https://www.informasystems.com/>

**Projects Description:** Informa Manage is basically a client site server data transfer management application, which is used to manage data transfer from one server to another server using FTP client class. We can configure more than one server between which we need to manage data transfer, this application has the facility to link up more than one code module for each server, while transfer code from one server to another we can customize data like(all file or only(.asps),or only dill, etc...) which is ready to send. Using this application, we can keep track of the assembly version of each code module of the respective server, as well we can also, check database tables mismatch between two data bases. If there is some database mismatch found while comparing this provides a facility to make both databases the same. This also provides a way to take back up of database in back file as well zip file, also, we can download the code of each server, the best thing which it provides is code publish technique ,which to publish the code by mapping the published code module path in this application.

**Responsibilities:**

- Client interaction to understand the requirements.
- Involved in development and enhancement activities using complete SDLC steps.
- Unit testing of the deliverable code 60% of Code Coverage).
- Independently developed and delivered server all critical modules.
- Involved in coding with React, Redux and Node.
- Involved in the deployment of the project on Azure Environment.

**Role: Full Stack Developer**

**Environment: React, Node JS, jQuery, Bootstrap, HTML,PSQL**

**Project Name: Duuzra**

**Project URL:**<https://apps.apple.com/gb/app/duuzra/id885451366>

**Project Description:** Duuzra is one great application for any event, meeting or presentation, It was developed to provide businesses with the features and flexibility to meet a host of requirements with a single tool. It has file sharing capabilities with supported media types of Pdf, slide presentations, videos, MS documents, media galleries and web content .Interaction and data capture could be done with live polling, feedback forms, questionnaires etc.

**Responsibilities:** As a Software Engineer, actively participated in activities – requirement analysis, designing, development and implementation of different change requests, implementation of new requirements, Developing the code, code analysis, code review. Developing website layout, application and functions layout.

**Role :Full Stack ROR Developer**

**Environment:Ruby,RubyonRails,HTML,JavaScript,JSON,Bootstrap,SLIM,Jquery,GitHub, Ubuntu, Restful, trello.**

**Project Name:**Prevent.ai

**URL:**[rm-alpha.prevent.ai](http://rm-alpha.prevent.ai)

**Project Description:** A platform for health care where medic can register themselves and get devices for measuring health parameters diagnostic, platform has mechanism to get that health information submitted by patients and they are displayed in the form of charts, and other UI components to be checked by the medical .medic can interact with patients by email & call through the platform. I managed to build rest API and then build UI components structured in FIGMA, and then make them integrated to deliver the functionality. I built micro services using AWS services where I built lambda functions and API with http API gateways and Dynamo DB, I also built a push notification service using SQS and SES with lambdas

**Role :** Full stack ROR developer

**Environment:**Ruby,RubyonRails,HTML,JavaScript,JSON,Bootstrap,SLIM,Jquery,GitHub, Ubuntu, Restful, trello.
